

global drug delivery formulation summit - in the last couple of years the development of biotherapeutics moved away from standard monoclonal antibodies to more complex formats which led to the need of miniaturized and high throughput screening systems in the early stage of formulation development, **double emulsion solvent evaporation techniques used for** - double emulsions are complex systems also called emulsions of emulsions in which the droplets of the dispersed phase contain one or more types of smaller dispersed droplets themselves, **centre de biophysique mol culaire upr 4301 pichon chantal** - in vitro transcribed mrna constitutes a versatile platform to encode antigens and to evoke cd8 t cell responses systemic delivery of mrna packaged into cationic liposomes lipoplexes has proven particularly powerful in achieving effective antitumor immunity in animal models, **the emergence of peptides in the pharmaceutical business** - besides the former peptide chemistry and molecular biology based strategies to populate peptide libraries which can be screened in straightforward pharmacology tests also reverse pharmacological approaches starting from natural sources of biological peptide mixtures have become a very realistic alternative
